rus-containing compound and the aromatic ring-containing resin is 5 to 100 parts by weight per 100 parts by weight of the polyacetal resin, and the proportion of the basic nitrogen-containing compound is 0.05 to 50 parts by weight per 100 parts by weight of the polyacetal resin.

15 15. A polyacetal resin composition according to claim 1, which further comprises at least one member selected from the group consisting of a dripping inhibitor, an oxidation inhibitor, a heat stabilizer, a filler, an
10 inorganic flame retardant, an inhibitor for inhibiting the formation of a phosphoric acid derivative, and an impact resistance improver.

SUB
B.1
15 16. A process for producing a flame-retardant polyacetal resin composition by mixing a polyacetal resin, a flame retardant claimed in claim 1, and a basic
15 nitrogen-containing compound.

17. A process according to claim 16, which comprises melt-mixing a master batch constituted of at least two components selected from a polyacetal resin, a
20 phosphorus-containing compound, an aromatic compound, and a basic nitrogen-containing compound, with a polyacetal resin.

18. A shaped article made from a polyacetal resin composition claimed in claim 1.

25 19. A shaped article according to claim 18, which is an electric/electronic device part, a mechanical device part, or an automobile part.
